

# Global Energy Company Powers up Intelligence Workflow with Silobreaker

Decision-makers are empowered to better understand, mitigate and future proof risks with streamlined reporting and access to more timely, reliable intelligence, faster.

## The Challenge

A global Energy Company was looking for a threat intelligence tool that would enable them to respond to their stakeholder's priority intelligence requirements quickly and reliably. Due to the large, multinational presence of the organisation, there was a demand for the delivery of timely and actionable intelligence to over 300 regional CISOs.

The company's threat intelligence team was newly established and consisted of just three analysts, meaning they lacked both the tools and manpower to produce a large number of deliverables on an ongoing basis to a variety of key decision makers. They were finding themselves pivoting between multiple platforms and open-source data sets to collate information and manually build reports. This significantly hampered their efficiency and put the team under pressure.

Moreover, the energy industry's constantly evolving threat landscape meant they needed a solution that could sift through vast amounts of data and deliver the most timely and relevant insights as intelligence needs changed.

## The Solution

With Silobreaker, the Energy Company now has a single platform that allows them to search across multiple datasets, creating and disseminating reports from numerous dashboards easily and efficiently.

- Customer  
Global Energy Company
- Company size  
90,000+ employees
- Solution users  
CTI Analysts
- Industry  
Energy

Silobreaker has replaced the threat intelligence team's manual, time-consuming tasks and processes with automatic data collection and processing mapped to their stakeholders' PIRs, accompanied by powerful analytical tools to deliver highly relevant intelligence at scale.

The team is also able to automatically monitor industry threats to understand the TTPs being used and set up automated alerts to regional CISOs on a regular basis – allowing the team to focus on other areas of work. This includes providing bespoke intelligence to other departments, and to other specialist teams.

Silobreaker's seamless ability to support a wide range of intelligence requirements also means that the team is able to support new stakeholders, most recently, by feeding intelligence to their vulnerability management team to give them confidence in their patch prioritisation efforts.

### The Outcome

- Search and monitor various sources of information, simplifying the process of creating and distributing reports that cater to the requirements of numerous key stakeholders
- As a result, decision-makers can better understand and mitigate threats against the company, its systems, and the energy industry at large, and create policies to better protect the organisation in the future
- Keep regional CISOs informed with regular alerts on current trending threats pertinent to their areas of operation, enabling them to prepare and prioritise tasking more effectively

Silobreaker is a leading security and threat intelligence technology company, that provides powerful insights on emerging risks and opportunities in real-time. It automates the collection, aggregation, accurate analysis and dissemination of data from open and dark web sources in a single platform, so intelligence teams can produce high-quality, actionable reports in line with priority intelligence requirements (PIRs). This enables global enterprises to make intelligence-led decisions to safeguard their business from cyber, physical and geopolitical threats, mitigate risks and maximise business value.
